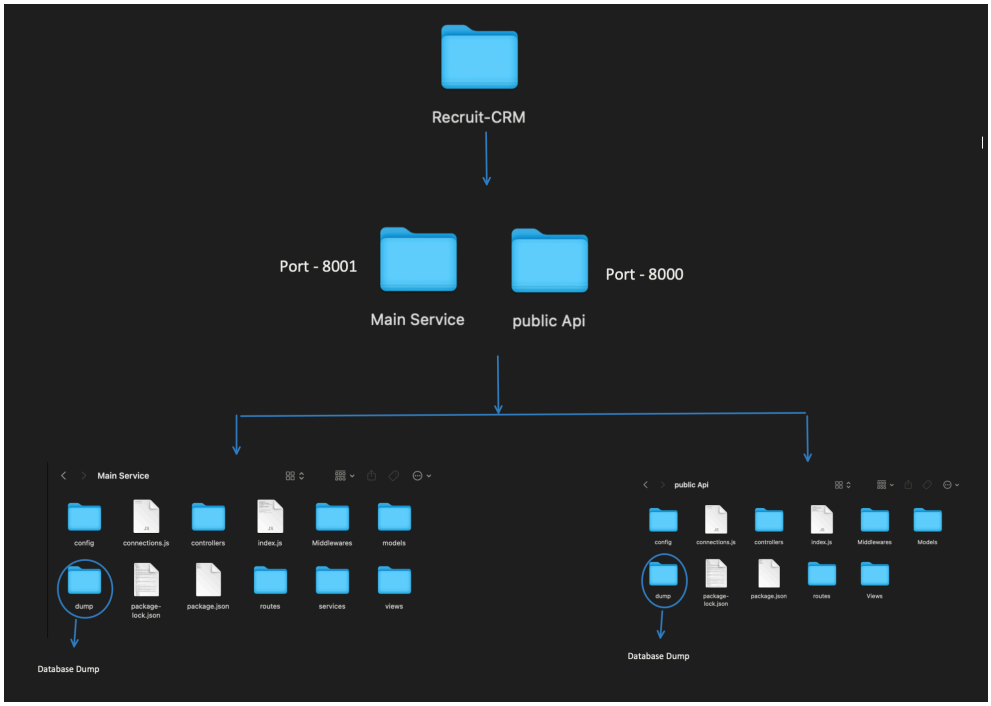
1. How to set up the project-

Prerequisites:

- Node.js, npm, and MongoDB (at port - 27017) are installed on your system.
- npm install -g nodemon (nodemon must be installed globally)

File Structure -



Setting Up and running the Main service

- install project dependencies: -
  npm install

- Running the main service -
  npm run start

Setting up and running the Public API

- install project dependencies: -
  npm install

- Running the main service -
  npm run start

Notes:

- Make sure to run the installation commands (**npm install**) in the respective project directories.
- Ensure that nodemon is installed globally before running the services.
